Memo to File:

RE: Utah Marblehead Lime Co.
ACT/045/003
Tooele County, Utah

On September 16, 1982, Susan Linner, Tom Tetting, Tom Portle, and Cy Young of the Division toured the Utah Marblehead Lime Co.'s quarry and millsite with Superintendent, Grant Reed. The site is reached by taking the Delle exit off I-15 and following a main road nine miles to the northwest.

80 Mr. Reed showed us how they have benched up the quarry area after they have finished extraction of the limestone. It appeared to result in a stable configuration. Due to a slump in the steel industry no quarrying has been done since April. At the mill site the rock is crushed, mixed with an iron additive, and heated in large rotating kilns to obtain the final product, which is used in steelmaking. One of the two kilns has also been shut down due to the market slowdown.

After the tour, permitting was discussed with Mr. Reed. Since he did not fill out the MR forms, he could not really answer our questions on the MRP. He did indicate that the company was still considering expanding their quarry into a new area, but indicated that they want to permit the existing site before applying for a modification.
